

Debts Lift Gold

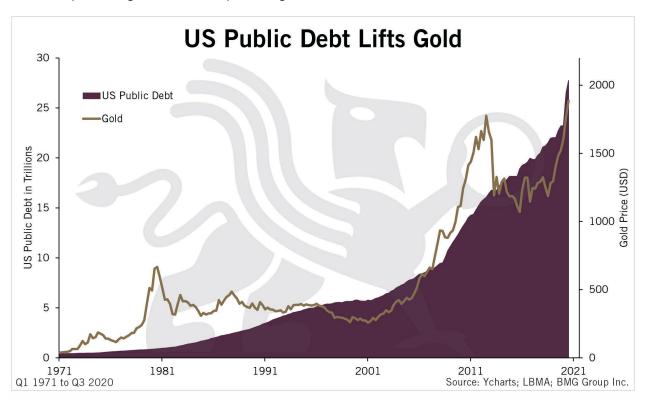

Precious Metal Prices Will Rise on a Deluge of Red Ink

February 10, 2021

By Nick Barisheff

he world is awash in debt, an immense, unfathomable ocean of financial obligations. The stack of IOUs is so enormous, the balances so large, they will never be fully settled without dreadful consequences to the global economy. This tsunami of debt was unleashed in 1971, when Nixon ended the backing of the US dollar with gold.

Since 1971, US debt and gold price have increased greatly. Traditionally, rampant increases in US debt occur when trying to pull the economy out of an economic downturn as displayed in the spikes that occurred in 2008 and 2020. Considering the amount of debt that has already been taken on to combat the pandemic combined with the rising uncertainty involving vaccinations and new strain variants, it can be anticipated that the worst is yet to come. As Democrats push towards passing an additional \$1.9 trillion stimulus package, governments are willing to take on previously unforeseen levels of debt to prop up the economy during the pandemic. This could lead to a promising future for the price of gold.

This divergence has been caused by manipulation of precious metals. A great deal has been written about this and one of the best books on the subject is *Rigged - Exposing the Largest Financial Fraud in History* by Stuart Englert.

Price manipulation never lasts, and when it ends there always tends to be a reset to inflationadjusted levels. The biggest questions are, when and how high will gold and silver prices rise?

However, even with manipulated markets precious metals have outperformed traditional financial markets and have generated over 10% returns in all currencies over the last 20 years.

How soon precious metals rise to normalized levels depends on how rapidly governments and central banks inundate the world with debased dollars and other fiat currencies, and how quickly individuals and institutions lose faith in those increasingly worthless debt-based currencies.

The <u>US national debt alone is nearly \$28 trillion</u>. This doesn't include the \$159 trillion of unfunded liabilities, which brings the total to \$187 trillion or about \$480,000 per American citizen. This number also doesn't include the <u>\$21 trillion in unaccounted federal expenditures</u> discovered by Prof. Mark Skidmore and his economic students at Michigan State University.

Global debt hit \$277 trillion last year, or 365% of world gross domestic product (GDP). Public debt as a percentage of GDP has soared to unsustainable and perilous levels. The US debt-to-GDP ratio hit 136% last year. Canada's debt-to-GDP ratio increased by nearly 80% through the third guarter of 2020, the highest rate among developed nations.

When you translate these incomprehensible and burgeoning debt totals into per capita obligations, it is obvious that they will never be repaid. They can only be inflated away.

Combined with hundreds of trillions in unfunded government liabilities, swelling debt and unregulated financial derivatives form a bottomless abyss that eventually will engulf nations and swamp the entire financial system. Little wonder that in 2002, billionaire investor Warren Buffett dubbed derivatives—which essentially are debt instruments used as collateral to take on more debt—"financial weapons of mass destruction." At that time derivatives totaled \$100 trillion, whereas today they are in excess of \$1 quadrillion.

Socialists maintain public debt is acceptable when borrowing is for the common good, and Modern Monetary Theory (MMT) advocates claim unlimited government spending is not a problem. They believe governments can create an infinite amount of currency to fund social services and public works projects. They fail to recognize that debt is not wealth and increasing the currency supply decreases its value and produces price inflation.

Nations cannot borrow and spend their way to prosperity. They cannot print their way out of persistent economic slumps without eventual and adverse results. Borrowing more to solve a spending problem is a desperate and preposterous ploy used by reckless and self-serving politicians and their enabling central banks.

Despite the misguided and utopian tenets of MMT, which really is a rebranding of infinite currency creation, insolvent governments have only three options to clear their underwater balance sheets. They can inflate their currencies to liquidate their debt; devalue their currencies against a more valuable asset such gold; or throw in the towel and default on their obligations.

		Month with Highest	Highest Monthly	Equivalent Daily Inflation	Time Required for Prices to
Country	Currency Name	Inflation Rate	Inflation Rate	Rate	Double
Hungary	Hungarian pengo	July 1946	4.19 x 10 ¹⁶ %	207%	15 hours
Zimbabwe	Zimbabwe dollar	November 2008	7.96 x 10 ¹⁰ %	98%	24.7 hours
Yugoslavia	Yugoslav dinar	January 1994	3.13 x 10 ⁸ %	64.60%	1.4 days
Germany	German papiermark	October 1923	29500%	20.90%	3.7 days
Greece	Greek drachma	October 1944	13800%	17.90%	4.3 days
Taiwan					
(Republic of China)	Old Taiwan dollar	May 1949	2178%	11%	6.7 days

The massive and continuing flood of currency creation indicates they've chosen the inflation option, which is driving up equity, cryptocurrency and real estate prices, along with the cost of consumer goods and services.

As the equity, bond and real estate bubbles deflate and the debt-ravaged and wrecked economy capsizes, seasoned savers and astute investors will be protected by their precious metals holdings. Others who have ignored the importance of precious metals will realize it is too late to obtain a meaningful allocation when it becomes obvious to everyone. As they have done throughout history, millions will then turn to gold and silver, which are prized for their attributes as wealth preservers and time-tested money. However, at that time, prices will be multiples of today's prices.

Debts Lift Gold BMG ARTICLES 4

"Those entrapped by the herd instinct are drowned in the deluges of history. But there are always the few who observe, reason, and take precautions, and thus escape the flood. For these few, gold has been the asset of last resort."

Antony Sutton

Precious metals will emerge as a fundamental and favoured financial sanctuary. As the tidal wave of debt dilutes and inundates the value of other assets, a growing number of individuals and institutions will convert their rapidly depreciating currencies into a limited quantity of gold, silver and platinum. This will cause their prices to rise amid the deluge of debt.

Those who heed the call to safeguard their assets and protect their savings will weather the economic turbulence and survive the financial storm. They will be ideally positioned to prosper in the new economic era if they own physical precious metals. BMG offers an extensive choice of bars and coins through its BullionBars program, with storage in Canada as well as in other key locations throughout the world.

Nick Barisheff is the founder, president and CEO of BMG Group Inc., a company dedicated to providing investors with a secure, cost-effective, transparent way to purchase and hold physical bullion. BMG is an Associate Member of the London Bullion Market Association (LBMA) as well signatory to the Six Principles of Responsible Investments (United Nations endorsed Principles for Responsible Investment – PRI).

Widely recognized as international bullion expert, Nick has written numerous articles on bullion and current market trends that have been published on various news and business websites. Nick has appeared on BNN, CBC, CNBC and Sun Media, and has been interviewed for countless articles by leading business publications across North America, Europe and Asia. His first book, \$10,000 Gold: Why Gold's Inevitable Rise Is the Investor's Safe Haven, was published in the spring of 2013. Every investor who seeks the safety of sound money will benefit from Nick's insights into the portfolio-preserving power of gold. www.bmg-group.com
